#### Introduction

The different features of Azure Center for SAP solutions (ACSS) are available from the command line interface (CLI). This document will guide you on how to install Azure CLI and the ACSS extension and then also walk you through the different commands available for ACSS in Azure CLI.

#### Install Extension

- 1. Install Azure CLI: How to install the Azure CLI | Microsoft Docs
- 2. Install Python
- 3. Make sure workloads extension is not installed using "az extension list"
  - a. This doc can be used to remove any existing extension: <u>az extension | Microsoft</u> Docs
- 4. Download and Install extension from Azure Extension for SAPaz solutions- Latest
  - az extension add --source=./workloads-0.1.0-py3-none-any.whl
     PS C:\Users\gargankit\OneDrive Microsoft\WaaS\Extension 14March> az extension add --source=./workloads-0.1.0-py3-none-any.whl
     Are you sure you want to install this extension? (y/n): y
     The installed extension 'workloads' is experimental and not covered by customer support. Please use with discretion.
     PS C:\Users\gargankit\OneDrive Microsoft\WaaS\Extension 14March> =
- 5. Login to correct AZ account
  - a. az login
  - b. az account set --subscription "<ACCOUNT\_SUBSCRIPTION\_ID>"
  - c. az account show -otable
    - i. should show correct account
- 6. Perform SAP Virtual Instance operations through extension
  - a. Can test through basic command "az workloads –help" or "az workloads sap-virtual-instance list"

```
Group

az workloads: Manage Workloads.

This command group is experimental and under development. Reference and support levels:

https://aka.ms/CLI_refstatus

Subgroups:

sap-application-server-instance: Manage sap application server instance with workloads.

sap-central-instance: Manage sap central instance with workloads.

sap-database-instance: Manage sap database instance with workloads.

sap-virtual-instance: Manage sap virtual instance with workloads.

Sap-virtual-instance: Manage sap virtual instance with workloads.

Commands:

sap-availability-zone-detail: Get SAP Availability Zone Details.

sap-disk-configuration: Get SAP Disk Configurations.

sap-sizing-recommendation: Get SAP sizing recommendations.

sap-supported-sku: Get SAP supported SKUs.

To search AI knowledge base for examples, use: az find "az workloads"

Please let us know how we are doing: https://aka.ms/azureclihats

PS C:\Users\gargankit\OneDrive - Microsoft\WaaS\Extension 14March>
```

#### **Known Issues**

Feature	Commands	Details
SVI Start/Stop	az workloads sap-virtual-instance start	Feature under development.
	az workloads sap-virtual-instance stop	

### Notes while using extension

1. Use same location for Service location and Application Location.

## Command list

CLI Command	Operation Swagger name	Comments
az workloads sap-availability-zone- detail	SAPAvailabilityZoneDetails	
az workloads sap-disk-configuration	SAPDiskConfigurations	
az workloads sap-sizing- recommendation	SAPSizingRecommendations	
az workloads sap-supported-sku	SAPSupportedSku	
VIS		
az workloads sap-virtual-instance list	ListByResourceGroup	
az workloads sap-virtual-instance list	ListBySubscription	
az workloads sap-virtual-instance show	Get	
az workloads sap-virtual-instance create	Create	
az workloads sap-virtual-instance update	Update	Replaces Tags, instead of adding them. This goes with CLI design and is correct way so that we can remove tags as well
az workloads sap-virtual-instance delete	Delete	
az workloads sap-virtual-instance start	Start	Do not use this, Feature in Development
az workloads sap-virtual-instance stop	Stop	Do not use this, Feature in Development
App Server Instance		
az workloads sap-application-server- instance list	List	
az workloads sap-application-server- instance show	Get	
az workloads sap-application-server- instance create	Create	payload Option missing. Body is readOnly, not allowed to be created separately, so this is valid
az workloads sap-application-server- instance update	Update	Replaces Tags, instead of adding them. This goes with CLI design and is correct way so that we can remove tags as well

az workloads sap-application-server- instance delete	Delete	
Central Server Instance	1	•
az workloads sap-central-instance list	List	
az workloads sap-central-instance show	Get	
az workloads sap-central-instance create	Create	payload Option missing. Body is readOnly, not allowed to be created separately, so this is valid
az workloads sap-central-instance update	Update	Replaces Tags, instead of adding them. This goes with CLI design and is correct way so that we can remove tags as well
az workloads sap-central-instance delete	Delete	
Database Instance		·
az workloads sap-database-instance list	List	
az workloads sap-database-instance show	Get	
az workloads sap-database-instance create	Create	payload Option missing. Body is readOnly, not allowed to be created separately, so this is valid
az workloads sap-database-instance update	Update	Replaces Tags, instead of adding them. This goes with CLI design and is correct way so that we can remove tags as well
az workloads sap-database-instance delete	Delete	

### Sample commands

The following section will show you sample commands and their results. You can use these and customise the input values to your need.

#### **Group: az workloads**

#### Command az workloads sap-availability-zone-detail

Example

az workloads sap-availability-zone-detail --app-location "eastus" --database-type "HANA" --sap-product "S4HANA"  $\setminus$ 

--location "centralus"

az workloads sap-availability-zone-detail --app-location "northeurope" --database-type "HANA" --sap-product "S4HANA" --location "northeurope"

#### Command az workloads sap-disk-configuration

Example

az workloads sap-disk-configuration --app-location "northeurope" --database-type "HANA" --db-vm-sku "Standard\_M32ts" --deployment-type "SingleServer" --environment "NonProd" --sap-product "S4HANA" --location "northeurope"

```
PS D'Nombrive - Nicrosoft Nead Teamon (Nicrosoft) as workloads as disk configuration - deplace the product of the Nicrosoft Nead Teamon (Nicrosoft) as experimental and under development. Reference and support levels: https://aka.es/CLT_refstatus ("diskCount": 4, "diskConfigurations": [ "diskCount": 4, "diskConfigurations": [ "diskCount": 4, "diskConselppe: "Premium_LRS", "diskConselppe: "Premium_LRS", "diskConselppe: "Premium_LRS", "diskCount": 1, "diskCount
```

#### Command az workloads sap-sizing-recommendation

Example

az workloads sap-sizing-recommendation --app-location "northeurope" --database-type "HANA" --db-memory 2000 --deployment-type "SingleServer" --environment "NonProd" --sap-product "S4HANA" --saps 60000 --location "northeurope"

```
PS D:\OneDrive - Microsoft\WaaS\Extension\14March\Testing> az workloads sap-sizing-recommendation --app-location "northeurope" --datab ase-type "HANA" --db-memory 2000 --deployment-type "SingleServer" --environment "NonProd" --sap-product "S4HANA" --saps 60000 --location "northeurope" Command group 'workloads' is experimental and under development. Reference and support levels: https://aka.ms/CLI_refstatus 
{
    "deploymentType": "SingleServer",
    "vmSku": "Standard_M128s"
}
```

#### Command az workloads sap-supported-sku

#### Example

az workloads sap-supported-sku --app-location "eastus2" --database-type "HANA" --deployment-type "SingleServer" --environment "NonProd" --sap-product "S4HANA" --location "eastus2"

```
D:\OneDrive - Microsoft\Waa$\Extension\14March\Testing> az workloads sap-supported-sku --app.
"--deployment-type "SingleServer" --environment "NonProd" --sap-product "S4HANA" --location

#### Command az workloads sap-central-instance delete

#### Example

az workloads sap-central-instance delete --central-instance-name "cs0" --resource-group "gargankit\_cliTest\_2" --sap-virtual-instance-name "AG5"

```
(venv) PS D:\OneDrive - Microsoft\Was\Extension\23March\Testing> az workloads sap-central-instance delete --central-instance-name "AG5"

1-instance-name "AG5"

Command group 'workloads' is experimental and under development. Reference and support levels: https://aka.ms/CLI_refstatus

Are you sure you want to perform this operation? (y/n): y

(yenv) PS D:\OneDrive - Microsoft\Was\Extension\23March\Testing>

(yenv) PS D:\OneDrive - Microsoft\Was\Extension\23March\Testing>
```

#### Group: az workloads sap-application-server-instance Command az workloads sap-application-server-instance list

#### Example

az workloads sap-application-server-instance list --resource-group "gargankit\_cliTest\_2" --sap-virtual-instance-name "AG5"

```

```

#### Command az workloads sap-application-server-instance show

#### Example

az workloads sap-application-server-instance show --resource-group "gargankit\_cliTest\_2" --sap-virtual-instance-name "AG5" --application-instance-name "app1"

```
| SpinkeDrue - MicrosoftWasSExtension\23March\Testings az workloads sap-application-server-instance show -resource-group "gargamit_milest_a" --sap-virtual-instance-name "ACC --application-instance-name "application-instance-name "applica
```

#### Command az workloads sap-application-server-instance create

#### Example

az workloads sap-application-server-instance create --resource-group "gargankit\_cliTest\_2" --sap-virtual-instance-name "AG5" --application-instance-name "app3" --location "eastus2" OperationNotAllowed (Hence no payload)

```
(venv) PS D:\OneOrive - Microsoft\WaaS\Extension\23March\Testing> az workloads sap-application-server-instance create --resource-group "gargankit_CliTest_2" --sap-virtual-instance-name "AG 5" --application-instance-name "appl" --location "eastus2" command group "workloads' is experimental and under development. Reference and support levels: https://aka.ms/CLI_refstatus
(OperationNotAllowed) This operation is not allowed.

Loud: OperationNotAllowed
Resource This operation is not allowed.
(venv) PS D:\OneOrive - Microsoft\WaaS\Extension\23March\Testing>
```

#### Command az workloads sap-application-server-instance update

#### Example

az workloads sap-application-server-instance update --resource-group "gargankit\_cliTest\_2" --sap-virtual-instance-name "AG5" --application-instance-name "app1" --tags tag1=value1

#### Command az workloads sap-application-server-instance delete

#### Example

az workloads sap-application-server-instance delete --resource-group "gargankit\_cliTest\_2" --sapvirtual-instance-name "AG5" --application-instance-name "app1"

#### Group: az workloads sap-database-instance Command az workloads sap-database-instance list

Example

az workloads sap-database-instance list --resource-group "gargankit\_cliTest\_2" --sap-virtual-instance-name "AG5"

#### Command az workloads sap-database-instance show

Example

az workloads sap-database-instance show --resource-group "gargankit\_cliTest\_2" --sap-virtual-instance-name "AG5" --database-instance-name "db0"

#### Command az workloads sap-database-instance create

#### Example

az workloads sap-database-instance create --resource-group "gargankit\_cliTest\_2" --sap-virtual-instance-name "AG5" --database-instance-name "db0" --location "eastus2"

#### OperationNotAllowed (Hence no payload)

```
| Some content of the content of the
```

#### Command az workloads sap-database-instance update

#### Example

az workloads sap-database-instance update --resource-group "gargankit\_cliTest\_2" --sap-virtual-instance-name "AG5" --database-instance-name "db0" --tags key1=value1

#### Command az workloads sap-database-instance delete

#### Example

az workloads sap-database-instance delete --resource-group "gargankit\_cliTest\_2" --sap-virtual-instance-name "AG5" --database-instance-name "db0"
